Physician - Follow up Visit encounter performed at Health Services.

SUBJECTIVE:

COMPLAINT 1 **Provider:** Martin, D. MD/CD

Chief Complaint: CARDIAC

Subjective: cc: "they told me; I'm good today"

Inmate Judge seen in follow-up after recent Hospital trip for chest pain where found with COVID-19.

He currently denies any chest pain today. Inmate apparently refused left heart catheterization. He had a CT heart where no cardiac mass or thrombus was found. He has an echo notable for Left Ventricular ejection fraction (LVEF): 55-60% and normal LV systolic function;

Pain: Vital signs pending entry.

ASSESSMENT:

Pain - Chest

Inmate reports to urgent care with complaint of chest pain. He is A&OX3, amb w/o assist and able to make all needs known. Inmate reports experiencing this pain for years. However, over the past few days the pain has gotten worse and started to radiate to left shoulder blade. He rates the pain 5/10 and describes the pain as sharp. No nausea and vomiting reported.

Vital signs assessed, all WNL. EKG done which was abnormal. MD contacted and advised of inmate's complaint. Orders received to transfer inmate to local ED for further evaluation of chest pain.

|---|--------------|--------------|-----------------|--------|
| SARS CoV 2 RNA(COVID 19), QUALITATIVE NAAT SARS CoV 2 RNA | NOT DETECTED | | NOT DETECTED | |

A Not Detected (negative) test result for this test means that SARS-CoV-2 RNA was not present in the specimen above the limit of detection. A negative result does not rule out the possibility of COVID-19 and should not be used as the sole basis for treatment or patient management decisions. If COVID-19 is still suspected, based on exposure history together with other clinical findings, re-testing should be considered in consultation with public health authorities. Laboratory test results should always be considered in the context of clinical observations and epidemiological data in making a final diagnosis and patient management decisions.

Please review the "Fact Sheets" and FDA authorized labeling available for health care providers and patients using the following websites:
<https://www.questdiagnostics.com/home/Covid-19/HCP/NAAT/fact-sheet2>
<https://www.questdiagnostics.com/home/Covid-19/Patients/NAAT/fact-sheet2>

This test has been authorized by the FDA under an Emergency Use Authorization (EUA) for use by authorized laboratories.

Due to the current public health emergency, Quest Diagnostics is receiving a high volume of samples from a wide variety of swabs and media for COVID-19 testing. In order to serve patients during this public health crisis, samples from appropriate clinical sources are being tested. Negative test results derived from specimens received in non-commercially manufactured viral collection and transport media, or in media and sample collection kits not yet authorized by FDA for COVID-19 testing should be cautiously evaluated and the patient potentially subjected to extra precautions such as additional clinical monitoring, including collection of an additional specimen.

Methodology: Nucleic Acid Amplification Test (NAAT)
includes PCR or TMA

Additional information about COVID-19 can be found at the Quest Diagnostics website:
www.QuestDiagnostics.com/Covid19.

Narrative

Negative results do not preclude 2019-nCoV infection.

This test has been evaluated and performance verified by The Grady Memorial Hospital Clinical Laboratory. It has Emergency Use Authorization by the FDA. This assay has been validated pursuant to the CLIA regulations and is used for clinical purposes.

Testing performed by Abbott Molecular M2000.

Cosign Required: Yes

Cardiology Clinic Note**Emory Cardiology Progress Note****Name:** Rashaun Judge**MRN:** 100621078**Date of Visit:** 07/07/20**Assessment and Plan**

Rashaun Judge is a 35 y.o. male with PMhx of chest pain who presents for as a new pt. Pt has been having atypical chest pain episodes unrelated to exertion, however, states that he does get extra fatigued with mild exertion now. So far cardiac work up (trop, TTE, EKG) unremarkable.

Problem list:**1. Chest pain**

- We will go ahead with a nuclear stress test given the baseline EKG abnormalities in the pt. However, we also want to evaluate his symptoms burden and its association with exertion, so will still attempt to have an EKG stress test as well to evaluate functional capacity and reproducibility of chest pain episodes.
- Will hold Eliquis (was given for a pos covid) and ASA now
- will ct lipitor and BB for now

Orders Placed This Encounter

- NM Cardiac Multiple Stress and Rest
- CV Stress Test, Exercise w NM Imaging
- EKG 12 lead

Subjective

HPI: Rashaun Judge is a 35 y.o. male with no PMH who presents for chest pain. Pt earlier presented to ED with one episode of chest pain lasting for more than 1 hour. Was evaluated and all work up including EKG and TTE and labs were unremarkable.

Pt states that he still ct to have chest pain episodes. These episodes are not related to exertion, can happen at rest last about 10-15 minutes and happen at least once a day. He denies dyspnea, orthopnea or PND

Cardiac History

History:

Last EKG:

7.7.2020

NS

Last TTE:

5.2020

The left ventricle is normal in size.

No intracardiac shunt noted in the visualized region

Left ventricular systolic function is normal.

LV ejection Fraction = 55-60%.

COVID-19 Information (continued)

If you were tested for Covid-19 today your results should be available in the next 24-36 hours. Please register for MyChart to be able to review your results as soon as they are available. Someone from Grady will contact you by phone only if your test is positive, within two business days to discuss the positive result and next steps in your care. If you continue to be symptomatic, regardless of your test results, please follow the home care instructions for isolation below.

Learning About Coronavirus (COVID-19)

Coronavirus (COVID-19): Overview

What is coronavirus (COVID-19)?

The coronavirus disease (COVID-19) is caused by a virus. It is an illness that was first found in Wuhan, China, in December 2019. It has since spread worldwide.

The virus can cause fever, cough, and trouble breathing. In severe cases, it can cause pneumonia and make it hard to breathe without help. It can cause death.

Coronaviruses are a large group of viruses. They cause the common cold. They also cause more serious illnesses like Middle East respiratory syndrome (MERS) and severe acute respiratory syndrome (SARS). COVID-19 is caused by a novel coronavirus. That means it's a new type that has not been seen in people before.

This virus spreads person-to-person through droplets from coughing and sneezing. It can also spread when you are close to someone who is infected. And it can spread when you touch something that has the virus on it, such as a doorknob or a tabletop.

What can you do to protect yourself from coronavirus (COVID-19)?

The best way to protect yourself from getting sick is to:

- Avoid areas where there is an outbreak.
- Avoid contact with people who may be infected.
- Wash your hands often with soap or alcohol-based hand sanitizers.
- Avoid crowds and try to stay at least 6 feet away from other people.
- Wash your hands often, especially after you cough or sneeze. Use soap and water, and scrub for at least 20 seconds. If soap and water aren't available, use an alcohol-based hand sanitizer.
- Avoid touching your mouth, nose, and eyes.

What can you do to avoid spreading the virus to others?

To help avoid spreading the virus to others:

- Cover your mouth with a tissue when you cough or sneeze. Then throw the tissue in the trash.
- Use a disinfectant to clean things that you touch often.
- Wear a cloth face cover if you have to go to public areas.
- Stay home if you are sick or have been exposed to the virus. Don't go to school, work, or public areas. And don't use public transportation, ride-shares, or taxis unless you have no choice.
- If you are sick:
 - Leave your home only if you need to get medical care. But call the doctor's office first so they know you're coming. And wear a face cover.
 - Wear the face cover whenever you're around other people. It can help stop the spread of the virus when you cough or sneeze.
 - Clean and disinfect your home every day. Use household cleaners and disinfectant wipes or sprays. Take special care to clean things that you grab with your hands. These include doorknobs, remote controls, phones, and handles on your refrigerator and microwave. And don't forget countertops, tabletops, bathrooms, and computer keyboards.

When to call for help

COVID-19 Information (continued)

Call 911 anytime you think you may need emergency care. For example, call if:

- You have severe trouble breathing. (You can't talk at all.)
- You have constant chest pain or pressure.
- You are severely dizzy or lightheaded.
- You are confused or can't think clearly.
- Your face and lips have a blue color.
- You pass out (lose consciousness) or are very hard to wake up.

Call your doctor now if you develop symptoms such as:

- Shortness of breath.
- Fever.
- Cough.

If you need to get care, call ahead to the doctor's office for instructions before you go. Make sure you wear a face cover to prevent exposing other people to the virus.

Where can you get the latest information?

The following health organizations are tracking and studying this virus. Their websites contain the most up-to-date information. You'll also learn what to do if you think you may have been exposed to the virus.

- **U.S. Centers for Disease Control and Prevention (CDC):** The CDC provides updated news about the disease and travel advice. The website also tells you how to prevent the spread of infection. www.cdc.gov
- **World Health Organization (WHO):** WHO offers information about the virus outbreaks. WHO also has travel advice. www.who.int

Severity of Illness

Eboni NCM, Baxter: Discharge Summary for 5/16/20.

Attestation signed by Gensler, Lauren M., MD at 5/16/2020 12:32 PM
 5/16/2020 12:28 PM

I saw and evaluated the patient. Discussed with resident and agree with residents findings and plan as documented in the residents note.

Patient without chest pain. He is still unwilling to undergo LHC even if stress test is positive. Patient COVID positive and likely would not be able to get stress test until he is negative. Will start on ASA and statin. HR in 70s, so will try low dose BB but this needs to be followed up on. Given refusal of LHC, even a positive stress test would unlikely change management. Will need outpatient stress and cardiology follow up in next few weeks. Due to being COVID positive he warrants Level 1 AC with Eliquis 2.5mg BID. He will also need to be in isolation in prison per their policy.

Judge, Rashaun

Admit date: 5/14/2020

Discharge date and time: 05/16/20

Admitting Physician: Mehul N. Tejani, MD

Discharge Physician: Dr Gensler

Admission Diagnoses: Chest pain
Chest pain

Discharge Diagnoses:

Chest pain, unspecified

Admission Condition: fair

Discharged Condition: good

Indication for Admission:

Hospital Course:

#atypical chest pain

#Twaves inversion in the antero-lateral leads

Patient presented with chest pain at rest. EKG findings was concerning for t waves inversion the anterolateral leads and troponins were negative time 3. Cardiology was consulted and recommended a left heart cath but patient declined without giving any specific reason. His work up showed A1C 4.5, lipid panel and TSH within normal limit and unremarkable urine drug screen. He underwent and echocardiogram and CT heart that did not show anything concerning. Cardiology recommended a stress test and patient was started on aspirin, Lipitor and metoprolol XL. He was advise to follow up with cardiology and get a stress test once possible (ideally within 1-2 weeks)

#COVID infection

Patient was tested for COVID in the setting of chest pain. He never required oxygen supplement and had no cough. His test came back positive and he was advised to self isolate until retested negative.

No cardiac mass or thrombus on the left atrial appendage thrombus, unchanged from yesterday exam.

Borderline cardiomegaly, however the measurement did not demonstrate enlargement. Otherwise

no acute findings in the chest.

CTPE:

IMPRESSION:

No pulmonary embolism. Unremarkable CT of the chest.

TTE

Interpretation Summary

The left ventricle is normal in size.

No intracardiac shunt noted in the visualized region

Left ventricular systolic function is normal.

LV ejection Fraction = 55-60%.

Discharge Exam:

General: well appearing young muscular, no acute distress

HEENT: NCAT, non-icteric, non-injected conjunctivae

Lymph: no cervical LAD

CV: non-elevated JVP, no peripheral edema; RRR, no murmurs

Pulm: Easy WOB, symmetric chest expansion

Abd: NTND

MSK: strength grossly intact, no gross abnormalities; no reproducible chest pain with palpation

Skin: no lesions on exposed skin

Neuro: Face symmetric, non-dysarthric

Psych: appropriate mood and affect

Disposition and Future Appointments:

The following appointments also exist:

No future appointments.

Patient Instructions:

Activity: activity as tolerated

Diet: regular diet and cardiac diet

Wound Care: none needed

There are no discharge medications for this patient.

Signed:

Leyla Makue Fowe, MD

Medication Refills Instructions

HOW TO REFILL YOUR PRESCRIPTIONS AT A GRADY PHARMACY

1. Find the 9-digit prescription number on the bottom left of your prescription label.
2. Call **404-616-5500**. This will dial the automated refill line.
3. Press "1" and enter your prescription number
4. When asked, type in the two-digit number of your birth month (ex: "07" for July)
5. When asked, type in the two-digit number for the day of your birth (ex: "70" for 1970)
6. If you have more refills, press "1"; if not, press "2"
7. Your prescriptions will be ready for pick up in 5 days.

If you need help, or have trouble getting your refills, dial "0"

***Remember to call in 5 days before you run out of medication!**

HOW TO GET A NEW PRESCRIPTION FOR THE MEDICINE YOU'VE RUN OUT OF, IF YOU USE A PHARMACY THAT IS NOT A GRADY PHARMACY?

Have the pharmacy send a request electronically to us.

Managing Your Medication

Managing Your Medicine can be difficult, especially if you are taking many medicines or treating different medical conditions.

re some tips:
sure you understand the exact dose and the time you take each medicine.
you go to different doctors, tell all of them about each medicine you take.
ways carry a list of your medicines.
-ict for an up-to-date list. ments (like vitamins).

you 9-11 years old always carry a list of your medicines with you. It may help to use a weekly or daily pill organizer - especially if you take many different medicines.

- Ask your pharmacist for an up-to-date list.
- Include herbals, over-the-counter and supplements (like vitamins).
- Any time your medicine changes, be sure to update your list.
- You can buy one at any pharmacy.
- Keep a medicine in the bottle it came in - except for those you put in a daily organizer.
 - The label has important information like drug name, dose, doctor, and expiration date.
- Use one pharmacy so the pharmacist can help you keep track of your medicine and watch for drug interactions.
- Do not take medicine in the dark, when you are tired or distracted.
 - You might take the wrong medicine or take too much.
 - If you need help, ask someone.
- Alcohol can interact with many medicines. Ask your doctor or pharmacist if it is safe to drink alcohol.
- When children or grandchildren visit, keep your medicine out of reach, especially if they do not have childproof caps.
- Never crush, chew or break capsules or pills unless a pharmacist or doctor says it is OK. Some medicines won't work if not swallowed whole. Let your doctor know if you cannot swallow pills.
- Never take medicine prescribed for someone else.
- Never stop taking a medicine because you feel better - always ask your doctor. Some medicines must be stopped gradually to avoid bad side effects.
- Medicine may take a while before you feel better, so give it time to work.
- If your doctor tells you to stop taking a medicine, throw it out right away (see below for safe ways to throw out medicines). Do not keep it to use later. Getting sick from accidentally taking old medicines can cost more than the medicine itself.
- If your medicine makes you feel sick or causes side effects, talk to your doctor about changing the dose or changing the medicine.
- Once the expiration date on a medicine passes, throw it away.
 - Crush and mix NON-PAIN medicine with coffee grounds, cat litter, or food scraps; seal in a bag and put in the trash.
 - Flush all pain medicine in the toilet.
 - If you don't know how to throw out your medicine, ask your pharmacist.

COVID-19 Information

COVID-19 Information (continued)

Learning About Coronavirus (COVID-19)

Coronavirus (COVID-19): Overview

What is coronavirus (COVID-19)?

The coronavirus disease (COVID-19) is caused by a virus. It is an illness that was first found in Wuhan, China, in December 2019. It has since spread worldwide.

The virus can cause fever, cough, and trouble breathing. In severe cases, it can cause pneumonia and make it hard to breathe without help. It can cause death.

Coronaviruses are a large group of viruses. They cause the common cold. They also cause more serious illnesses like Middle East respiratory syndrome (MERS) and severe acute respiratory syndrome (SARS). COVID-19 is caused by a novel coronavirus. That means it's a new type that has not been seen in people before.

This virus spreads person-to-person through droplets from coughing and sneezing. It can also spread when you are close to someone who is infected. And it can spread when you touch something that has the virus on it, such as a doorknob or a tabletop.

What can you do to protect yourself from coronavirus (COVID-19)?

The best way to protect yourself from getting sick is to:

- Avoid areas where there is an outbreak.
- Avoid contact with people who may be infected.
- Wash your hands often with soap or alcohol-based hand sanitizers.
- Avoid crowds and try to stay at least 6 feet away from other people.
- Wash your hands often, especially after you cough or sneeze. Use soap and water, and scrub for at least 20 seconds. If soap and water aren't available, use an alcohol-based hand sanitizer.
- Avoid touching your mouth, nose, and eyes.

What can you do to avoid spreading the virus to others?

To help avoid spreading the virus to others:

- Cover your mouth with a tissue when you cough or sneeze. Then throw the tissue in the trash.
- Use a disinfectant to clean things that you touch often.
- Wear a cloth face cover if you have to go to public areas.
- Stay home if you are sick or have been exposed to the virus. Don't go to school, work, or public areas. And don't use public transportation.
- If you are sick:
 - Leave your home only if you need to get medical care. But call the doctor's office first so they know you're coming. And wear a face cover.
 - Wear the face cover whenever you're around other people. It can help stop the spread of the virus when you cough or sneeze.
 - Clean and disinfect your home every day. Use household cleaners and disinfectant wipes or sprays. Take special care to clean things that you grab with your hands. These include doorknobs, remote controls, phones, and handles on your refrigerator and microwave. And don't forget countertops, tabletops, bathrooms, and computer keyboards.

When to call for help

Call 911 anytime you think you may need emergency care. For example, call if:

- You have severe trouble breathing. (You can't talk at all.)
- You have constant chest pain or pressure.
- You are severely dizzy or lightheaded.

COVID-19 Information (continued)

- You are confused or can't think clearly.
- Your face and lips have a blue color.
- You pass out (lose consciousness) or are very hard to wake up.

Call your doctor now if you develop symptoms such as:

- Shortness of breath.
- Fever.
- Cough.

If you need to get care, call ahead to the doctor's office for instructions before you go. Make sure you wear a face cover to prevent exposing other people to the virus.

Where can you get the latest information?

The following health organizations are tracking and studying this virus. Their websites contain the most up-to-date information. You'll also learn what to do if you think you may have been exposed to the virus.

- **U.S. Centers for Disease Control and Prevention (CDC):** The CDC provides updated news about the disease and travel advice. The website also tells you how to prevent the spread of infection. www.cdc.gov
- **World Health Organization (WHO):** WHO offers information about the virus outbreaks. WHO also has travel advice. www.who.int

Chest pain

Chest pain

Discharge Diagnoses:

Chest pain, unspecified

Initial Condition: fair**Discharged Condition:** good**Reason for Admission:****Initial Course:****Initial chest pain****ECG inversion in the antero-lateral leads**

Patient presented with chest pain at rest. EKG findings was concerning for ST waves inversion in the lateral leads and troponins were negative at time 3. Cardiology was consulted and recommended heart cath but patient declined without giving any specific reason. His work up showed A1C 4.5, panel and TSH within normal limit and unremarkable urine drug screen. He underwent an angiogram and CT heart that did not show anything concerning. Cardiology recommended a stress test and patient was started on aspirin, Lipitor and metoprolol XL. He was advised to follow up with cardiology and get a stress test once possible (ideally within 1-2 weeks)

COVID infection

Patient was tested for COVID in the setting of chest pain. He never required oxygen supplement and no cough. His test came back positive and he was advised to self isolate until retested negative.

Consults: cardiology**Significant Diagnostic Studies:****ECG:****TEE:**

Cardiac mass or thrombus on the left atrial appendage thrombus, unchanged from yesterday

Medical Necessity - Review # 131127568 - MRN: 000100621078 - RASHAUN JUDGE

Severity of Illness

Eboni NCM, Baxter: Admission review for 5/14/20.

Emory Medicine History and Physical | Team F

Patient Name: RASHAUN JUDGE

Patient MRN: 100621078

Admission date: 5/14/2020

PCP: No primary care provider on file.

CC: "chest pain"

HPI: RASHAUN JUDGE is a 35 y.o. male with no significant PMH presenting for chest pain. Pt is an inmate in federal prison.

The pt reports recurrent episodes of mild chest pain, around 10x over the past several years. Each time he is told his EKG is slightly abnormal but stable and no further work-up is pursued.

Four days ago, the frequency of these events intensified. He reports L sided chest pain, which is sometimes sharp, sometimes squeezing, sometimes a/w dyspnea. Pain is 4/10 and comes on randomly, lasting for a few minutes at a time before spontaneously remitting. It is not a/w nausea, diaphoresis, anxiety or palpitations. He reports significant cardio exercise without symptoms. No association with food or time of day.

He reports MI in his mother at the age of 71 and an aunt with a pacemaker, but otherwise no significant FH of cardiac disease. He is a current smoker <1 ppd x 10 years. Former marijuana smoker but no current drug use and no h/o cocaine.

He denies any sick contacts and no fevers/chills, cough, dyspnea, n/v, diarrhea, abdominal pain, anosmia/ageustia. No LE edema or orthopnea.

Pt reports he has been complaining of this for four days to nurses at the prison but no further action was by medical staff until today when he told a guard directly that he was having now constant chest pain. EKG prior to arrival was noted to have changes concerning for STEMI.

VS:BP 118/63 | Pulse 61 | Temp 36.8 C (98.2 F) | Resp 12 | Ht 1.651 m (5' 5") | Wt 74.8 kg (165 lb) | SpO2 100% | BMI 27.46 kg/m

EKG: 75 bpm, sinus rhythm, RAA w/ borderline right axis deviation, biphasic T waves in v3-v5, t wave inversions II, III and AVF, ST elevation V3-V5

LABS: Cre 1.3, CBC-wnl, D-Dimer 566, Triglyceride-Serum 46, Covid-19 lab test positive, PTL 138

Intensity of Service

Eboni NCM, Baxter: Admission review for 5/14/20.

MEDS:

enoxaparin (LOVENOX) 40 mg/0.4 mL injection 40 mg

Dose: 40 mg

Freq: EVERY 24 HOURS Route: SC

apixaban (ELIQUIS) tablet 2.5 mg

Dose: 2.5 mg

Freq: 2 TIMES DAILY Route: PO

aspirin chewable tablet 81 mg

Dose: 81 mg

Freq: DAILY Route: PO

atorvastatin (LIPITOR) tablet 40 mg

Dose: 40 mg

Freq: DAILY Route: PO

PLAN:

RASHAUN JUDGE is a 35 y.o. male presenting with non-anginal chest pain and concerning EKG findings with negative troponin warranting admission for further cardiac work-up.

#Chest Pain

#EKG Changes c/f Myocardial Ischemia

TTE w/o focal wall motion abnormality per cardiology. Pt reports long h/o abnormal EKGs and intermittent chest pain. No recent drug use. Troponins negative. CAD vs coronary vasospasm vs non-cardiac chest pain. CT PE negative. Given his lack of typical anginal chest pain, young age without significant risk factors, negative cardiac biomarkers or focal wall motion abnormalities, reported stable EKG changes, ability to do ~1 hour of cardio without symptoms, I have a low suspicion for ischemic disease, but his EKG changes are certainly concerning especially in the setting of chest pain and warrants further work-up.

- Cardiology consulted; recommend ASA and admission for observation with CTA vs LHC. No indication for heparin or other medications at this time.

- TTE ordered

- Trend troponin

- Check lipids, A1c

#COVID-19 PUI

Given chest pain with occasional dyspnea and CXR abnormality.

- COVID-19 NP swab pending

- COVID-19 isolation precautions

- SCD for DVT prophylaxis for now given low clinical suspicion and possible procedure tomorrow AM

Other

Eboni NCM, Baxter: Discharge Summary for 5/16/20.

I saw and evaluated the patient. Discussed with resident and agree with residents findings and plan as documented in the residents note.

Patient without chest pain. He is still unwilling to undergo LHC even if stress test is positive. Patient COVID positive and likely would not be able to get stress test until he is negative. Will start on ASA and statin. HR in 70s, so will try low dose BB but this needs to be followed up on. Given refusal of LHC, even a positive stress test would unlikely change management. Will need outpatient stress and cardiology follow up in next few weeks. Due to being COVID positive he warrants Level 1 AC with Eliquis 2.5mg BID. He will also need to be in isolation in prison per their policy.

Judge, Rashaun

Home Medication Instructions HAR:5007950009

Printed on:05/16/20 1232

Medication Information:

apixaban (ELIQUIS) 2.5 MG TABS tablet

Take 1 tablet (2.5 mg total) by mouth 2 times every day.

aspirin 81 mg chewable tablet

Take 1 tablet (81 mg total) by mouth every day.

atorvastatin (LIPITOR) 40 MG tablet

Take 1 tablet (40 mg total) by mouth every day.

metoprolol succinate XL (TOPROL-XL) 25 mg tablet

Take 1 tablet (25 mg total) by mouth every day.

35 y.o.

1/11/1985

Admit date: 5/14/2020

Discharge date and time: 05/16/20

Admitting Physician: Mehul N. Tejani, MD

Discharge Physician: Dr Gensler

Admission Diagnoses: Chest pain

Chest pain

Chest pain

Discharge Diagnoses:

Chest pain, unspecified

Admission Condition: fair

Discharged Condition: good

Indication for Admission:

Hospital Course:

#atypical chest pain

#Twaves inversion in the antero-lateral leads

Patient presented with chest pain at rest. EKG findings was concerning for t waves inversion the anterolateral leads and troponins were negative time 3. Cardiology was consulted and recommended a left heart cath but patient declined without giving any specific reason. His work up showed A1C 4.5, lipid panel and TSH within normal limit and unremarkable urine drug screen. He underwent and echocardiogram and CT heart that did not show anything concerning. Cardiology recommended a stress test and patient was started on aspirin, lipitor and metoprolol XL. He was advise to follow up with cardiology and get a stress test once possible (ideally within 1-2 weeks)

#COVID infection

Patient was tested for COVID in the setting of chest pain. He never required oxygen supplement and had no cough. His test came back positive and he was advised to self isolate until retested negative.

Consults: cardiology

Significant Diagnostic Studies:

CTHEART:

IMPRESSION:

No cardiac mass or thrombus on the left atrial appendage thrombus, unchanged from yesterday exam.

Borderline cardiomegaly, however the measurement did not demonstrate enlargement. Otherwise no acute findings in the chest.

CTPE:

IMPRESSION:

No pulmonary embolism. Unremarkable CT of the chest.

TTE

Interpretation Summary

The left ventricle is normal in size.

No intracardiac shunt noted in the visualized region

Left ventricular systolic function is normal.

LV ejection Fraction = 55-60%.

Discharge Exam:

General: well appearing young muscular, no acute distress

HEENT: NCAT, non-icteric, non-injected conjunctivae

Lymph: no cervical LAD

CV: non-elevated JVP, no peripheral edema; RRR, no murmurs

Pulm: Easy WOB, symmetric chest expansion

Abd: NTND

MSK: strength grossly intact, no gross abnormalities; no reproducible chest pain with palpation

Skin: no lesions on exposed skin

Neuro: Face symmetric, non-dysarthric

Psych: appropriate mood and affect

Disposition and Future Appointments:

The following appointments also exist:

No future appointments.

Patient Instructions:

Activity: activity as tolerated

Diet: regular diet and cardiac diet

Wound Care: none needed

There are no discharge medications for this patient.

Signed:
Leyla Makue Fowe, MD
